

STOVETOP  
**FIRESTOP**<sup>®</sup>  
MICROHOOD

Louisville Fire and Safety is pleased to offer the newest addition to the StoveTop FireStop<sup>®</sup> family of automatic stovetop fire suppressors, **StoveTop FireStop Microhood<sup>™</sup>**.

StoveTop FireStop Microhood is specifically designed to suppress small grease fires on stovetops with microhoods (microwaves) overhead, which are found in a growing number of apartments.

## Features and Benefits

- § Uses technology similar to the original StoveTop FireStop, America's leading automatic stovetop fire suppressor for over 30 years
- § Suppresses small stovetop grease fires automatically when flames reach it (*i.e.*, smoke or heat alone will not activate the device, preventing false activations)
- § Features a sleek, low-profile design that is approved for use under microhoods 15–22 inches above the cooking surface (*i.e.*, under microwave vent hoods that are lower than traditional vent hoods)
- § Effectively releases non-toxic, fire-suppressing BC-type powder directly to the burner (each can contains 6.6 ounces x 2 cans per unit x 2 units per stove)
- § Dispenses powder by gravity—no pressurized spray that could splatter
- § Alerts the resident that the device has activated by emitting a loud “pop”
- § Saves lives and prevents significant fire damage or water sprinkler damage
- § Costs less than 4¢ per day per stove
- § Requires no maintenance, inspection, or re-certification in the five-year lifetime
- § Laboratory tested
